**EXAMINER'S AMENDMENT**

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

In the claims:

In claim 11, line 1, "Claim 2" has been deleted and –Claim 3—has been added  
after "according to".

The following is an examiner's statement of reasons for allowance: The present invention is directed to a microphone in a cylindrical housing having elliptical end faces. Independent claim 1 identifies the uniquely distinct feature of cylindrical microphone housing having two non-parallel elliptical end face oriented mirror symmetrically with respect to a plane perpendicular to the lateral axis, two transducer mounting plates perpendicular to the lateral axis and two sound damping tragus pads secured to inner faces of respective end panels in combination with all the disclosed limitations of claim 1. Independent claim 2 identifies the uniquely distinct feature of a hearing aid comprising a cylindrical microphone housing having two non-parallel elliptical end face oriented mirror symmetrically with respect to a plane perpendicular to the lateral axis mounted on an eyeglass frame with a horizontal lateral axis and the elliptical end faces converging forwardly and downwardly in combination with all the disclosed limitations of claim 2. Independent claim 3 identifies the uniquely distinct feature of a

hearing aid comprising a cylindrical housing and an elliptical end face and an earpiece for mounting the housing on a human ear with the lateral axis substantially horizontal and the long axis of the elliptical end face sloping downwardly to the front in combination with all the disclosed limitations of claim 3. The closest prior art, Whener (5,666,433) discloses a microphone comprising a cylindrical microphone housing having two non-parallel elliptical end face oriented mirror symmetrically with respect to a plane perpendicular to the lateral axis and two transducer mounting plates but fails to teach the mounting plates are perpendicular to the lateral axis and two sound damping tragus pads secured to inner faces of respective end panels and Wehner (US 4836326) discloses an omniphonic microphone system comprising a cylindrical housing with two transducer mounting plates perpendicular to the lateral axis but fails to teach the housing two non-parallel elliptical end face oriented mirror symmetrically with respect to a plane perpendicular to the lateral axis and two sound damping tragus pads secured to inner faces of respective end panels. The prior art fails to anticipate or render the independent claims obvious.

.Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
